

Def.

Let $E \subset X$ be a non-empty subset of a Metric space X . Define

$$P_E: X \rightarrow \mathbb{R}; x \mapsto \inf_{z \in E} d(x, z)$$

is called a distance from x to E .

Prop. Let P_E be a distance from x to E in a Metric space X .

1). $P_E(x) = 0$ if and only if $x \in \overline{E}$.

2). P_E is Continuous Uniformly.

Proof. To show the first, using the property of closure and infimum

$$x \in \overline{E} \Leftrightarrow \forall \varepsilon > 0, B_\varepsilon(x) \cap E \neq \emptyset \Leftrightarrow \forall \varepsilon > 0, \exists y \in E \text{ such that } d(x, y) < \varepsilon \Leftrightarrow \inf_{z \in E} d(x, z) = 0.$$

To show the second assertion, observe that: given $x, y \in E$,

$$P_E(x) \leq d(x, z) \leq d(x, y) + d(y, z) \text{ for any } z \in E$$

Since it holds for all $z \in E$,

$$P_E(x) \leq d(x, y) + P_E(y)$$

and which implies $P_E(x) - P_E(y) \leq d(x, y)$. Similarly, $P_E(y) - P_E(x) \leq d(x, y)$, so

$$|P_E(x) - P_E(y)| \leq d(x, y) \text{ for any } x, y \in X.$$

Given $\varepsilon > 0$, take $\delta = \varepsilon$, then we obtain that

$$d(x, y) < \delta \Rightarrow |P_E(x) - P_E(y)| \leq d(x, y) < \varepsilon$$

□

Lemma. Let $A, B \subseteq X$ be non-empty disjoint closed set in Metric space X .

Then, a map $f: X \rightarrow \mathbb{R}; x \mapsto \frac{P_A(x)}{P_A(x) + P_B(x)}$ where $P_E: X \rightarrow \mathbb{R}; x \mapsto \inf_{z \in E} d(x, z)$

is continuous function satisfying $A = f^{-1}[\{0\}]$ and $B = f^{-1}[\{1\}]$.

Proof. At first, since

$$P_A(x) + P_B(x) = 0 \Leftrightarrow P_A(x) = P_B(x) = 0 \Leftrightarrow x \in \overline{A} \cap \overline{B} = A \cap B = \emptyset,$$

so $P_A(x) + P_B(x) \neq 0$ for all $x \in X$, so f is well-defined

And, since P_A and P_B are continuous, $P_A + P_B$ also continuous, so $f = P_A / (P_A + P_B)$ is continuous, being rational of continuous function.

Observe that: since $P_A + P_B > 0$ and $P_A, P_B \geq 0$,

$$f(x) = 0 \Leftrightarrow P_A(x) = 0 \Leftrightarrow x \in \overline{A} = A \quad \text{and}$$

$$f(x) = 1 \Leftrightarrow P_B(x) = 0 \Leftrightarrow x \in \overline{B} = B, \quad \text{therefore}$$

$$A = f^{-1}[\{0\}] \quad \text{and} \quad B = f^{-1}[\{1\}]. \quad \square$$
