

Lemma. Let $M \subset \mathbb{R}^3$ be a surface, and let $\alpha: I \rightarrow M$ be a curve.

If for some patch $X: D \rightarrow \mathbb{R}^3$, $\text{range } \alpha \subseteq X[D]$,

then there exist unique differentiable functions α_1, α_2 on I such that

$$\alpha(t) = X(\alpha_1(t), \alpha_2(t)) \text{ for all } t \in I.$$

Proof. By definition
